

Finding the most checked-out item

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 18.01
-

Description:

Is there a fast way to find out what is the most checked-out item (the item with the most loans)?

Resolution:

Doing these two SQL commands will give you this info:

1. SQL> select max (z30_no_loans) from z30;
2. SQL> select z30_rec_key from z30 where z30_no_loans = nnn; <where "nnn" is the number returned by the first SQL> .

See KB 8192-3274 in regard to the limit of this field to 999.
