
sip2_server parameter, "use_sub_library_code=N"

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 16.02

Description:

In the sip2_server log, when the server displays the parameters, there is an entry that says "use_sub_library_code=N" – is that significant?

Resolution:

The "use_sub_library_code" parameter is used in the print line ("AG") field.

A value of "Y" means: don't use the display form of the sublibrary from tab_sub_library.eng, column 5; use the short (3-5)-character sublibrary code instead.
