

Searching for field z30-note-opac in bibliographic database, WRD index

- **Article Type:** Q&A
- **Product:** Aleph
- **Product Version:** 20

Question

Is it possible to search for information from field z30-note-opac (in item record) in index "WRD = Anywhere in the record" in bibliographic database?

Answer

You can expand the field z30-note-opac into the title using `./xxx01/tab/expand_doc_bib_z30_nnn` and create an entry in `./xxx01/tab/tab11_word`

Example:

```
./xxx01/tab/tab_expand  
WORD expand_doc_bib_z30 CONF=expand_doc_bib_z30_tes,TAG=TES  
--> fields from item record will be overtaken to field TES in bibliographic record. If you use already expand_doc_bib_z30  
you don't have to create a new table but only enhance the existing one.
```

```
./xxx01/tab/expand_doc_bib_z30_tes  
! 2 3 4 5  
!-!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!-!-!!!!!!!!!!!!!!!!-!  
# active-library l space N  
# z30-material m space X  
# z30-sub-library 1 space N  
# z30-collection 2 space N  
# z30-call-no 3 space X  
# z30-call-no-2 9 space X  
# z30-inventory-number 6 space X  
# z30-barcode 5 space X  
# z30-note-internal 4 space X  
# z30-note-opac 7 space X <- Field opac note goes to TES$$$7
```

Result looks like this:

```
Util f_04  
enter file name (or q to exit) doc_expand  
Enter expand_menu [No Expand]: WORD  
ENTER DOC NUMBER : 50105  
FMT L BK  
LDR L 00000nam^a22^^^^^^u^4500  
001 L 000050105
```
