
pc_server_defaults - security_path_g

- **Article Type:** Q&A
 - **Product:** Aleph
 - **Product Version:** 20
-

Question

Can the standard, distributed security_path_g be used instead of the following in \$alephe_root/pc_server_defaults:

```
setenv security_path_g
```

```
"$TMPDIR;$FILE_TMPDIR;${ALEPH_MOUNT}/a${ALEPH_VERSION}_${ALEPH_COPY};${USER_MOUNT}/u${ALEPH_VERSION}
users/omri;/tmp;${aleph_utf}/utf_files;/exlibris/a19_6"
```

Answer

Yes. The standard pc_server_defaults security_path_g works successfully :

```
"$TMPDIR;$FILE_TMPDIR;${ALEPH_MOUNT}/a${ALEPH_VERSION}_${ALEPH_COPY};${USER_MOUNT}/u${ALEPH_VERSION}
```
