
Upgrade Express: A_ERROR, A_WARNING, A_INFO messages

- **Article Type:** Q&A
 - **Product:** Aleph
 - **Product Version:** 21
-

Question

What do the different messages (A_ERROR, A_WARNING, A_INFO) in the Upgrade Express logs indicate?

Answer

* The A_INFO messages are the lowest severity. They should be read, but, generally, don't require any special action.

* The A_WARNING messages may or may not require action. If the "3. Run Upgrade Express" step is being run, then messages such as the following will appear:

"A_WARNING: The file xxxx already exists!" -- in regard to which, see the article "[Upgrade Express: "A_WARNING: The file xxxx already exists!"](#)" (KB 16384-63441).

* The A_ERROR messages usually require action. The most common are:

1. "Merge manually" messages, in regard to which, see the articles:
 - a. "[Upgrade Express: "The file can not be upgraded automatically. Merge manually!"](#)" (KB 16384-26529) and
 - b. "[Dealing with UE warning & error messages for XSL files](#)" (KB 16384-30804)
2. "The table znn does not exist in xxxnn", in regard to which, see the article "[Upgrade Express: "A_ERROR: The table znn does not exist in xxxnn"](#)" (KB 16384-63474)

Additional Information

The Upgrade Express main.log indicates for each step either "OK" or "FAILURE".

In the case of FAILURE, one or more of the following appears:
Errors reported, Warnings reported, or Information reported.

The individual step nnnn.log file will have, in the case of ...

Errors reported, an A_ERROR line;
Warnings reported, an A_WARNING line;
Information reported, an A_INFO line.
