## p\_ret\_01 doesn't produce any output

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

I need to delete two MARC record subfields: 586 y & 856 z

I go to run Services-> Catalog Maintenance Procedures -> Global Changes (manual-21 ).

Input tells me that I must first run "Retrieve Catalog Records" function to get file.

I run Retrieve Catalog Records (ret-01) with output file name, date range 1/1/2000 to 6/1/2008 tag 856## subfield y . It runs for a long time.

TASK Manager Batch Log shows that it started, and ended 25 mins later. It lists the parameters that I included in the batch run. ie my file name.

I do not see ANY file produced in my print directory.

### Resolution:

As stated in the p\_ret\_01 Help for the Output File parameter: "The file can be found later in the \$alephe\_scratch directory."
