## p\_ret\_01 doesn't retrieve any records

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

After upgrading from v16 to v20, p-ret-01 is generating output with 0 size for ABC01. We want p\_ret\_01 to retrieve all records (since we are trying to export all bibs without filtering), but none are retrieved.

We see this in the p\_ret\_01 log:

```
setenv p_code "00000"  
setenv p_sub_code_a "0"  
setenv p_text_from_a ""  
setenv p_text_to_a ""  
setenv p_sub_code_b ""  
setenv p_text_from_b ""  
setenv p_text_to_b ""  
setenv p_code_2 " 000"  
setenv p_sub_code_a_2 " 0000000"
```

These are *\*not\** the values we have entered for these parameters on the submission screen.

It works OK for USM01.

### Resolution:

The p-ret-01.xml file under /exlibris/aleph/u20\_1/aleph/pc\_b\_eng/ is different from the standard version. Parameters F23-F37 are missing.

Please copy the standard p-ret-01.xml from /exlibris/aleph/a20\_1/aleph/pc\_b\_eng, where it is correct. (That's why it works for USM01.)
