## Adding "OPAC notes" / "Circ notes" to the Paging slip / Hold slip

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Description:

Can we add "OPAC notes" and/or "Circ notes" to the paging request printouts?

If so, how would we do this?

### Resolution:

If the field that you want to add is one whose table is already represented by other fields in the relevant `.form_eng` form, then the answer is "Yes". (If there are no columns from the table in the form, then this would be an enhancement request.)

The "OPAC notes" is `z30_note_opac` and the "Circ notes" is `z30_note_circ`. Looking at the `.form_eng/hold-request-slip.xml`, we see that there *are* other z30 fields on the form, so we can add these two fields like this:

```
<xsl:call-template name="display-gen-split">  
<xsl:with-param name="label" select="'OPAC Notes:'"/>  
<xsl:with-param name="value" select="./z30-note-opac"/>  
</xsl:call-template>
```

```
<xsl:call-template name="display-gen-split">  
<xsl:with-param name="label" select="'Circ Notes:'"/>  
<xsl:with-param name="value" select="./z30-note-circ"/>  
</xsl:call-template>
```
