## CJK and web services

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18.01
- 

### Description:

We are working on CJK implementation and I need our to get the web services links to work with the vernacular Chinese, Japanese and Korea authors.

E.g.: [http://aleph.univ.edu/F?func=find-c&ccl\\_term=sys%3D004424674&local\\_base=mybase](http://aleph.univ.edu/F?func=find-c&ccl_term=sys%3D004424674&local_base=mybase)

Click on the vernacular author and the services page gives the "No Services Were Found" message.

If you click on the romanized/pinyin author entry, e.g., "Cai, Yizhong, 1924-", the services work fine.

What do I need to do to get services to work for the vernacular author entries? I've looked at tab\_service and nothing I tried made things any better (only worse).

What do I need to do to get services to work for both the romanized author entry and the paired vernacular author?

### Resolution:

How do I get the web's tab\_services to work with the AUTHC index? It currently looks like this:

```
1#### www_f_service_find_acc AUT,ATH
1#### www_f_service_scan_acc AUT,ATH
```

It still doesn't work when I add:

```
1#### www_f_service_find_acc AUT,ATH,AUTC,ATHC
1#### www_f_service_scan_acc AUT,ATH,AUTC,ATHC
```

Solution (thanks to Harvard):

The expand\_doc\_bib\_lng\_cjk needs to be added to the tab\_expand WEB-FULL section,  
Then the AUTC etc entries in tab\_service start to work in the Web OPAC.
