
Script not running as defined in jobd

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

patron extract script (/exlibris/aleph/u16_1/abc50/sql_scripts/patron_extract.sql) is to run daily at 10:45am from the Job_list. It is called in the job list by running /exlibris/aleph/a16_1/aleph/proc/extract_patrons.

This job_list entry is not generating any output or log. Why?

Resolution:

The jobd logs in \$alephe_scratch show this:

```
ABC50 /exlibris/aleph/a16_1/aleph/pr c/extract_patrons ABC50
```

Note the spaces where the "o" should be in "proc". The job daemon expects all proc's to be in \$aleph_proc. You should *not* specify the full path.

In the job list, change:

```
W0 11:05:00 Y ABC50 /exlibris/aleph/a16_1/aleph/proc/extract_patron
```

to:

```
W0 11:05:00 Y ABC50 extract_patrons ABC50
```
