

How to tell the Apache version

- **Article Type:** Q&A
 - **Product:** Aleph
 - **Product Version:** 21
-

Question

How can we tell what version of Apache we have?

Answer

1. Type the following command on the server

```
> httpd -v
```

2. You will receive a response indicating the version, such as:

```
user@server(a21_1):...apache/logs>httpd -v  
Server version: Apache/2.2.22 (Unix)  
Server built: Feb 26 2012 12:56:13
```
