-

Description:

How do you get the number of titles in a particular collection code from a web opac search?

I am trying to find the total for the collection "FACPU".

The number from the gui is 594.

I tried Advanced Search, keyword anywhere a or e or i or o or u
Limit by collection Faculty Publications/Archives. But that gives a total of 275.

This request is for Public Access staff who do not use/have/know the gui

Resolution:

The following line in `./www_f_eng/scan-include-2-abc01` is commented out:

```
<!--mf--><!-- <option value=COL $$5000-S"COL">Locatn/collectn</option>
```

We see (in `tab11_acc`) that this `z01 COL` index has the `LOC` subfield `c` (collection code):

```
LOC## COL c
```

If you uncomment this line, you will be able to Browse on Collection code and get a count of the number of titles.
