
p_manage_02 sort: illegal byte sequence

- **Article Type:** General
- **Product:** Aleph
- **Product Version:** 18.01

Description:

abc01 manage-02 exits due to job suspension.

p_manage_02_a_2.log has:

```
start sort /aleph/aleph/u18_1/abc01/scratch/manage_02_1_2
sort: can't read /aleph/aleph/u18_1/abc01/scratch/manage_02_1_2: Illegal byte sequence
end sort /aleph/aleph/u18_1/abc01/scratch/manage_02_1_2
Wed Oct 22 19:29:46 EDT 2008
/aleph/aleph/u18_1/abc01/scratch/manage_02_2_2: No such file or directory.
```

Resolution:

I see that this server has the problem described in KB 16384-9825:

The "ver" command gives the messages:

```
sort: missing NEWLINE added at end of input file STDIN
```

...

```
Service Pack: 1137
```

even though Service Pack 1613 has been installed.

The "ver" command could be corrected by adding the "setenv LC_ALL C" command to the \$alephm_proc/ver file, but that is not so important....

I *believe* that the p_manage_02 "sort ... Illegal byte sequence" message may be a similar problem.

I added a

```
setenv LC_ALL C
```

line to the beginning of \$alephm_proc/p_manage_02 (as the second line) and an

```
unsetenv LC_ALL
```

as the 2nd-to-last line of the proc (immediately preceding the "exit").

and the p_manage_102 / p_manage_02 ran successfully.
