

Printing labels in batch

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

Our staff are reading "Printing Labels in batch mode in aleph 500.pdf" (- release 14.2_5 and later) and are looking to do label printing in "batch" .

I have noticed that none of the documents on printing after the 14.2_5 document mention "batch printing". Didn't find anything in the Knowledge Base that spoke of it either. Is there (still) such a thing. Am I missing something? Or is this (batch labels) an obsolete concept?

Resolution:

The "Printing Labels in batch mode in aleph 500.pdf" document is still valid in versions 16, 17, and 18.

The only thing which is different is that the references to "Web Services" are now "GUI Services".

The p_ret_adm_01 and p_item_03 jobs described there are still present and valid.
