-

Desired Outcome Goal:

Creation of a file of holdings records with item barcodes, with the expand_doc_bib_z30 including the holdings number (in addition to the z30_barcode), so that it can be matched to the holdings file.

Procedure:

Add the following to the ./xxx01/tab/expand_doc_bib_z30 file:

```
Y z30-hol-doc-number          x space          N
```

Additional Information

The expand_doc_bib_z30 program reads the ./xxx01/tab/expand_doc_bib_z30 table to see what z30 columns should be expanded into what field bib "Z30" / \$\$x field/subfields.

Though the distributed ./usm01/tab/expand_doc_bib_z30 includes certain z30 columns, *any* z30 column can be specified in this table -- including z30-hol-doc-number-x. Just make certain that the subfield value chosen (in column 3) is not already used by some other (uncommented) z30 column.
