
locked by another user" messages

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 17.01
-

Description:

You are unable to update (or delete) a record because of "locked" messages, such as:

"Record is locked by another user", 0092 in ./error_eng/global

"Record is currently locked by another user", 0013 in ./error_eng/pc_cat_c0203

"Resource is locked by another user", 0092 in ./error_eng/pc_com_c0110

"Record updated by another user", 0014 in ./error_eng/pc_cat_c0203

Resolution:

In the case of a doc record (bib, authority, HOL, ADM, or Course Reserve), exit the record, do "Load record from server" to reload it, and then check the "Edit -- View record's catalogers" to see who has updated it.

Is it "UE-01" or "BATCH"?

Yes -- This can result from:

- * a tab_subfield_punctuation problem
- * "setenv UE_01_ENABLE_FIXDOC Y"

No -- It's the login of another actual cataloger.

In the case of a doc record with an actual-cataloger-CAT field or items, patrons, etc. consult Article 000038415 ("Record locked by another user") in regard to viewing/deleting z60 lock records. And Article 000043086 ("Lock periods in pc_server defaults") in regard to lock periods.
