## CAT: Titles Index grid sometimes truncates field display

- **Product:** Voyager
  - **Product Version:** 8.2.0; 10.1.0
  - **Relevant for Installation Type:** Total Care; Dedicated-Direct; Direct; Local
- 

### Symptoms

Some fields for some records are truncated in Titles Index when field information wraps to second line

### Defect Status

Issue VYG-6687 is resolved in Voyager 10.1.0

### Replication Steps

1. System Administration > Search > Indexes - Composite Definitions > New
  1. Name: {Use long index name that will wrap to second line in Titles Index display}
  2. Definitions: System Number (035a); System Number (035z); System Number for de-duping (035a), or other set of indexes
  3. Sort Order: Author / Title / Date Published (descending)
  4. Search Results: Author, Uniform Title, Full Title
  5. Check the box for "Show Index Column With Search Results"
  6. Save.
2. System Administration > Search > Titles List Column Names > author > Edit > Display Name: {Use long display name that will wrap to second line in Titles Index display}
3. Cataloging > Search > Find > Search index created in first steps
4. Note that a record with a title that wraps past first line does not display title after first line, though other records with titles wrapping to multiple lines do.

### Workaround

Set author search result field as last field in grid.

1. System Administration > Search > Indexes - Composite Definitions > {index} > Edit > Search Results
  2. Move author result field to Available.
  3. Move author result field to Selected (which will place at end of search result field list)
