## Search for title in Serials Check-In causes RTE 65099

- **Article Type:** Known Issue
  - **Product:** Voyager
  - **Product Version:** 7.2.5
  - **Relevant for Installation Type:** Total Care; Dedicated-Direct; Direct; Local
- 

### Symptoms

- \* In Acquisitions > Check-In > Serials Check-In if you type a long title such as "Bulletin of the American Schools of Oriental Research" the client gives 65099 and closes.
- \* If the component name has > 45 characters, the title searched for uses > 45 characters, and the site is on Linux, the initial search will say "Subscription component information not found!"; any subsequent search for the component generates a run time error 65099 and the client will shut down.

---

### Defect Status

Issue VYG-127 is resolved in Voyager 8.2.2 and above

---

### Workaround

Search for the component using the truncated title or use Other Search instead of Check-in Title.

---

### Additional Information

#### Replication steps:

1. Create a component in serials check-in with a title that's greater than 45 characters.
2. Search for the check-in title using a search term with more than 45 characters.
3. The first search will return an error stating "Subscription component information not found!"; any subsequent search for the component (even with the truncated title), will generate a run time error 65099 and the client will close.

**Other information:** This problem only happens for Linux. 7.2.5 contained a fix for Issue 18049; this may be related.
