
ARC ETL process failed without any specific error message

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 3
-

Problem Symptoms:

The ETL process fails without any specific error message

Cause:

Configuration; lack of Table space

Resolution:

Adjust configuration

`./xxx50/tab/arc_conf_table.conf`

It is recommended to specify the relevant time period for each of the tables for the extract to minimize the amount of data to the relevant records.

Additional Information

Example for `./xxx50/tab/arc_conf_table.conf`

Change from

```
[ARC-HISTORY]
from year = 2000
```

to

```
[ARC-HISTORY]
from year = 2009
[OPAC]
from date = 20090101
[EVENTS]
from date = 20090101
[PATRON-DATA]
eliminate_data=N
[CIRC-LOGGER]
date = 20090101
```

Refer to document "Aleph configuration for ARC 3.0", chapter "1.10 Define arc_conf_table.conf" for more details.
