

## AVA field shows “Check\_holdings”

- **Article Type:** General
  - **Product:** Aleph
  - **Product Version:** 18 and up
- 

### Problem Symptoms:

For some records the availability is shown as "Check\_holdings". Why?

### Resolution:

There are several reasons for an AVA field to return with "check\_holdings":

- (1) Non-suppressed HOL record has no item and no field 856\$\$u
- (2) Record has more items than defined in xxx01/tab/tab\_expand with parameter expand\_doc\_bib\_avail "Threshold"
- (3) Record has some items with item\_process\_status (which automatically assigns the status as "Unavailable) and some items without item\_process\_status, ergo the statement is "check\_holdings"
- (4) This is the case in all "son" record items, regardless if there are items on loan or not (ONLY valid for Aleph 18).

This behavior is corrected with rep\_change 002271 in Aleph 18

Description: Expand routine expand\_doc\_bib\_avail - "AVA" fields are not created for BIB records having "LKR" field of type "ITM", if the ADM record referenced by the "ITM" link is not connected to the BIB record. This has been corrected.

Implementation Notes:

In ./[BIB\_Library]/tab/tab\_expand, replace expand\_doc\_bib\_avail with expand\_doc\_bib\_avail2.
