

SDI – which template is used for bor-sdi-00

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 20
-

Problem Symptoms:

In a multi ADM environment with several `form_ing` directories which bor-sdi-00 template is used when running `SDI - Selective Dissemination of Information (sdi-01)`?

Cause:

Defect

Resolution:

In Aleph 20 the Template is taken from the library where `p_sdi_01` was started. This is also valid for Aleph 21 if one user is assigned to several libraries (`USER-SHARING=YES` in `xxx50/tab/tab100`).

There is also a fix in Aleph 21:

***** Rep_ver #017783 *****

Description: When the `p-sdi-01` batch process (SDI - Selective Dissemination of Information) is run in a multi-ADM installation, it handles SDI requests of patrons belonging to ADM libraries other than the active ADM library (where the batch is run). This has been corrected.

This means that from Aleph 21 on only requests which belong to the same ADM library (based on `Z303_USER_LIBRARY`) are handled when running `p_sdi_01`. In this case the template from this library will be used.
