

BULK: Records are not keyword indexed

- **Article Type:** General
- **Product:** Voyager
- **Product Version:** 9

Problem Symptoms

- After Bulk Importing records, cannot find with keyword search.
- When viewing Titles Index containing imported records, Full Title, Author and Date are empty
- Resaving record populates Titles Index fields
- Import log (log.imp*) has message at end:

On Voyager 9.0.0:

```
WARNING: Keyword indexes are out of sync.
```

Run the REGEN utility with the following options enabled:

```
KEYWORD=Y
```

```
TURBOBIBTEXT=Y
```

```
MOVEDATAFILES=Y
```

```
UPDATEVOYINI=Y
```

On Voyager 9.1.0 and higher:

```
*****
```

```
WARNING: Keyword indexes have not been updated. Records  
can be found with headings and left-anchored  
searches.
```

```
To index for keyword searching, please run a  
keyword regen via the util menu or using  
the standard Cert 300 regen instructions.
```

```
*****
```

Cause

In Voyager 9.0.0 and higher, the BulkImport default is to import records without keyword indexing, unless otherwise specified (see Additional Information).

Resolution

A keyword regen will index the records. Open a Case with Voyager Support to request a regen during Support hours, or run a regen any time using the UTIL menu:

1. On the Voyager server, open the UTIL menu for your xxxdb:

1. `dlib xxxdb`
2. `util`

2. Type I for Index Maintenance option.

3. Follow the prompts for Regenerate keyword files for xxxdb (option K).

BEFORE YOU BEGIN:

- A keyword regen puts your catalog into read-only mode. Searching can continue, but no records can be updated while the regen is in progress.
- Circulation activity can continue uninterrupted during the keyword regen.

See: [UTIL Menu: Running a keyword regen](#)

Or, if the record set is relatively small and can be put into a GDC Record Set easily, a GDC Index Job can keyword index the imported records. See [GDC: Purpose of GDC Reindexing job?](#)

Additional Information

If you wish to have keyword indexing done **at the time of the import**:

- In [WebAdmin](#), check the box for "Generate Keyword Index? Default is no keyword index generated"
- At the command line, add parameter: `-KADDKEY`
