

tab_attr_sub_library and internal vs. external IP

- **Article Type:** Q&A
 - **Product:** Aleph
-

Question

Our PCs have internal IPs that are different from the external IPs.
Is tab_attr_sub_library checking for the internal or for the external IP?

Answer

When checking IPs in tab_attr_sub_library Aleph is working as follows:

- First the program will check if it find relevant lines by the INTERNAL IP.
 - If this was not successful and no line has been found it will check the EXTERNAL IP.
