### Question

MAB environment: Links to e-ressources are stored in field 655e1 but some in field 655-1. When records are exported using "Download Machine-Readable Records (print-03)" with fix routine MABVU the e-ressources from field 655-1 are missing. Does adding a line 655#1 8564 to the fix routine solve the problem?

Fix routine `tab_fix_mab2usm_vu`

```
655a1 8560
655b1 8561
655c1 8562
655d1 8563
655e1 8564
655h1 8567
```

---

### Answer

Yes, adding a line ...

```
655-1 8560
```

...would solve the problem.
