## How does fix\_doc\_mab\_build\_545 work?

- **Article Type:** Q&A
  - **Product:** Aleph
  - **Product Version:** 20
- 

### Question

How does fix\_doc\_mab\_build\_545 work during import and export of records

---

### Answer

#### 1. Import

Text "ISSN" in field 545 is deleted and text after the ISSN number moved to subfield \$\$e

From

545a L \$\$aISSN 0170-0731 = International bibliography of historical sciences

To

545a L \$\$a0170-0731\$\$e= International bibliography of historical sciences

#### 2. Export

Text "ISSN" is added and content from subfield \$\$e is added after ISSN number

From

545a L \$\$a0170-0731\$\$e= International bibliography of historical sciences

To

545a L aISSN 0170-0731 = International bibliography of historical sciences

Configuration example:

```
./xxx01/tab/tab_fix
```

```
MABEX fix_doc_mab FUNC=OUTPUT,FILE=tab_fix_mab
```

```
MABIM fix_doc_mab FUNC=INPUT,FILE=tab_fix_mab
```

```
./xxx01/tab/tab_fix_mab
```

```
545 fix_doc_mab_build_545
```

---

### Additional Information

Relevant only for MAB customers
