## Case sensitivity of file extension / file names - Rosetta

- **Article Type:** Q&A
  - **Product:** Rosetta
  - **Product Version:** 4
- 

### Question

Is Rosetta sensitive for file name / extension lower / upper case?  
For example, is file.jpg and file.JPG handled the same way?

### Answer

Yes, Rosetta is case sensitive for file-names and file extensions.

### Additional Information

If your file is failed due to format issue you can add a 'mismatch rule'.

Note, the list of files in the 'mismatch rules' is closed, in case your file extension is not in the list or with lower/upper case you can add a 'auto correction rule'

In the 'auto correction rule' you can add manually any file extension.
