
p_edi_10: What does it match on?

- **Article Type:** General
 - **Product:** Aleph
 - **Product Version:** 16.02
-

Description:

Does p_edi_10 match strictly on the order number? We see messages in the log about ISSN/ISBN -- is it matching on those too?

Resolution:

p_edi_10 matches on the order number. You should make sure that the form of the number on the invoice matches exactly the number in ALEPH (for instance, no leading zeroes added). If there is no match on the order number, the program checks for the vendor reference number.

Once a matching order has been found, the job will check the ISSN/ISBN -- and issue a message if it doesn't match, but this is just a warning. It is not used for matching.

Additional Information

p_edi_10
