## DataLoader doesn't accept valid LCCN

- **Article Type:** General
  - **Product:** SFX
  - **Product Version:** 4
- 

### Description:

The format of LCCN is a number of 8 or 9 digits.

When the LCCN is received from Conser, the prefix and suffix of the LCCN are stripped and due to that problems occur when exporting and loading the LCCN to other applications.

Our development team is currently working on changing the applications in order to support the correct LCCN format.

### Resolution:

From issue resolution:

Fixed in 4.1.4

[11/10/2011 13:42:45 Itay Stein]

Final Status: Closed [11/10/2011 1:42:53 PM Itay Stein]
