

Inheritance issue when using the e-constituent loader

- **Article Type:** General
 - **Product:** Verde
 - **Product Version:** 2
-

Description:

When creating e-constituents related to aggregator package using e-constituent loader, the e-constituents does not inherit the package statuses or activation date.

Scenario for example:

1. Create an aggregator e-package, add e-product status (e.g. production) and activation from date
2. Create an e-constituent, associate it with the locally created e-package
3. Create an e-constituent loader file, upload note: update db = yes, update package = yes, package= [package title]
4. File loads successfully, constituents appear as part of e-package LF e-book package

Please note: when creating e-constituent record via Verde UI, the statuses and 'activation from date' are inherited

Resolution:
