Description:

Problem Description:ILL GUI: summary status displays “No Supplier” instead of the supplier name and two errors are recorded in pc_server_6336.log

Actual Results:“No supplier” displays plus the following errors are recorded

Oracle error: io_buf_z410_partner_code
ORA-01722: invalid number

Oracle error: io_buf_z410_list_next
ORA-01002: fetch out of sequence

Expected Results:Summary status would display supplier name and no errors would be recorded

Resolution:

In Z411 there were records for which the Z411-SEQUENCE part of the z411_rec_key was not numeric (blank or characters). Since the program compares it to the field Z410_Z411_SEQUENCE in Z410 (which is defined as number), it gave the error: invalid number.

Some examples:

```
Z411_REC_KEY
-----
000000004update_uo
000000009
000000370update_00
000001276lg[Xk\VIg
```

These 87 records were deleted
