

Redundancy in the output of general reports

- **Article Type:** General
 - **Product:** Verde
 - **Product Version:** 2
-

Description:

In the General report of e-products, if the retrieved e-product has an attribute (License, Acq...) and this attribute was entered as one of the report's parameters, the output file shows one row for the e-product and another row for the attribute. The first row is unnecessary.

For example, in the attached output file you can see two lines: line 3 holds information from the e-product attribute only and line 4 holds information from both the e-product and License attributes. Line 3 is redundant.
