

Allowed file locations for ingests

- **Article Type:** Q&A

Question

Where can we place files that are to be ingested?

Answer

Files can be placed within the "streams" directory of the ingested IE, or in other locations - but in case of other locations a full path must be used in the METS file.

Please note - some locations are forbidden: files cannot be placed in the top level directory of the IE, and it is highly unadvised to place other files in the directory containing the ie.xml file ("content" directory). xml files cannot be placed there at all.
