
Replace invalid email address Rosetta uses when downloading SP

- **Product:** Rosetta
 - **Product Version:** Any
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

When a Rosetta SP is downloaded and installed, emails are being sent to an invalid email address of Ex Libris, and the installer receives "Undelivered Mail Returned to Sender" notification.

New installations will contain a valid address. In existing environments this can be changed by replacing, in each server

```
set exl_mail = "Rosetta-SP-Install@exlibrisgroup.com"
```

with

```
set exl_mail = "RosettaSP@exlibrisgroup.com"
```

in `$dps_dev/profile/sp.config`

by using:

```
sed -i 's/Rosetta\-SP\-Install\@exlibrisgroup\.com/RosettaSP\@exlibrisgroup\.com/g' $dps_dev/profile/sp.config
```
