

---

## Scheduled harvests are not running, and can't start the batch queue

---

### Symptoms

No jobs are running including scheduled harvests.  
You see that the batch queue is off and you try to restart it, but with no success

#### To check the batch queue:

```
>dlib gen01  
  
util > C > 1
```

#### When the batch queue is running the output will contain these two processes:

```
*** util_c_01 - check GEN01 batch queue ***  
  
3048 ?      S      1:09 /exlibris/dtl/d3_1/dtl/exe/lib_batch GEN01  
3406 ?      S      0:00 /exlibris/dtl/d3_1/dtl/exe/rts32 ue_01_a GEN01.d3_1
```

#### To restart the batch queue:

```
>dlib gen01  
  
util > C > 2
```

## Cause

The file `/exlibris/dtl/u3_1/gen01/files/lib_batch_log` reached its maximum, 2GB.

---

### Resolution

Delete or back-up this file and then run:

```
>dlib gen01  
  
util > C > 2
```

To restart the batch queue.

Check that it's running with `util > C > 1`
