

## Add local English title to a non-English object

- **Product:** SFX
  - **Product Version:** 4
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local
- 

### Question

We want to be able to find a Japanese journal in the A-Z list but would to display an English title.

Is that possible? how?

### Answer

The only way to display a different title is to create a local MAIN title to the object and then re-index the azlist.

However, it is not possible to add a local English title to a non-English object. (Object Language not equal "English")

This is not supported by SFX.

The solution for this is to create a local English Object with the English title as MAIN title.

We apologize for the inconvenience.
