
Add a Language to The DigiTool User Interface

Overview

It is possible to add additional language translations to the DigiTool user interface by following the instructions in Chapter 33 of [DigiTool Configuration Guide.pdf](#)

After implementing the configurations described it is necessary to add the language as an option in the "Choose Language" dialogue, accessed by clicking the globe icon in the upper right of the user interface.

In this example, Turkish has been added:

Instructions

These were the steps performed to add the Turkish language to the menu as in the example.

Edit `www_r_conf.xml`

Edit the file `/exlibris/dtl/u3_1/dtle/tab/www_r_conf.xml`

At the terminal:

```
>dtle
```

```
>cd tab
```

```
>vi www_r_conf.xml
```

The following section needs to be added:

```
<language>
    <code>TUR</code>
    <name lng="ENG">Türk</name>
    <name lng="TUR">Türk</name>
    <name lng="GER">Türk</name>
    <name lng="FRE">Türk</name>
    <name lng="HEB">Türk</name>
</language>
```

In your case the languages may differ slightly depending on what has been added to the server.

Restart the www server

At the terminal:

```
>start_w
```

This command should only take a second or two to complete.

The new language should now appear in the Choose Language menu.

Important Notes

The configuration described here should be performed only after making the changes described in Chapter 33 of [DigiTool Configuration Guide.pdf](#)

In order for non-Latin or accented characters to appear correctly on the web page you will need to add this line to the top of `/exlibris/dtl/u3_1/dtle/tab/www_const.[language]`:

```
CHARACTER_CONVERSION=none
```
