
prof_library: No such file or directory

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

In upgrading from version 20 to 22, after

1. running the Upgrade Express "2. Install customer data" step,
2. restoring aleph_start from alephe.org, modifying it with local values, and
3. doing "source aleph_start",

dlib to the local xxx01 library gives this message:

```
/exlibris/aleph/u20_2/xxx01/prof_library: No such file or directory.
```

(Of course, there is no "u20_2" directory, it exists only in the v20 instance, not the v22.)

Resolution

This problem occurred because the aleph_start.private had these lines:

```
setenv xxx01_dev /exlibris/aleph/u20_2
setenv xxx10_dev /exlibris/aleph/u20_2
<etc.>
```

Changing these to "u22_1" and doing "source aleph_start" made the dlib work properly.
