

## System-generated item barcodes

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description

For system generated barcodes, there are two options:

1. creating item barcodes using the Z30-REC-KEY [ADM record number + item sequence number]
2. creating them using last-barcode-number from UTIL/G/2

The default setting for the item barcode is option 1. If option 2 is preferred, add the following line to xxx50/tab/tab\_checksum:

```
CSCR-Z30-BARCODE checksum_create_z30_by_doc_no
```

Note: these options were formerly set in tab100 (TAB100-DEFAULT-ITEM-BARCODE) and are now located in ./tab/tab\_checksum.

### Additional Info / Related Articles

It is also possible to manually generate barcodes; for example, scanning a barcode sticker with a barcode scanner. For more information about acceptable scanners, see Article "Acceptable types of barcodes and scanners for use with Aleph".
