
Dummy Heading in Staff Privileges; pw_library not in Access Rights

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Problem Symptoms:

Staff Privileges Box

- * There are no permitted libraries in the staff privileges box
- * There is only one header and it says "Dummy Heading" even though the pc_tab_col.eng has the proper headings of "User Name" and "Permitted libraries"

Access Rights-Select Library

- * There is only Aleph and the BIN's
- * There is no PWD50
- * Clicking on "Aleph" gets the response: "The library code you have entered is incorrect or not allowed for you".

Cause:

- * The label "Dummy Heading" is used when the program finds no lines of the necessary column heading type in the pc_tab_col.eng.
- * The PWD50 path_convert file is empty.
- * There is no PAS line for PWD50 in the library_relation table.

Resolution:

1. Run "echo \$pw_library" on the server to show the pw_library (in this example, it is PWD50)

2. Add these lines added to the PWD50 path_convert file:

```
$pwd50_dev/pwd50/form_eng $xxx01_dev/xxx01/form_eng  
$pwd50_dev/pwd50/tab/pc_tab_col $xxx01_dev/xxx01/tab/pc_tab_col
```

(in this example, "xxx01" is the library used for pc_tab_col, usually the BIB library)

3. Add PWD50 to the library_relation table > PAS line. (Note: The first value in the PAS line needs to be the ADM library. This library is also the z66_user_library.)
