
Which MS windows version is certified for which Aleph version?

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23, 24
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

Which windows version is certified for which Aleph version?

Answer

Windows 11 - Certified for Aleph 24

Windows 10 – Certified for Aleph 23 and Aleph 22 Service Pack 22.1.4 (Dec, 2015) and up .
Certification for Aleph 21 is not planned.

Windows 8 – Certified for Aleph 22 and up.

Windows 7 – Certified for Aleph 20 and up.

Additional Information

Note: Aleph GUI client is not certified for any Terminal Server, such as Citrix XenApp.

It should be noted that that fact that a particular version of Windows is not certified for a particular version of Aleph does *not* necessarily mean that it won't work: new versions of Windows are not tested with versions of Aleph which are no longer officially supported.

For example: Windows 11 has not been tested with Aleph versions 23, but some customers report using it successfully.

To get additional information on such experiences you may want to post a query to the Global Aleph Users list.
