

Language for X-Service responses

How to change the language for a X-Services response? Can it be another language than English by default?

- **Product:** Aleph
 - **Product Version:** 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Question

Is it possible to change the standard language for X-Services from English to e.g. German? Currently one can only add "&con_lng=ger" to a request like

http://servername:8991/X?op=read-item&library=xxx50&item_barcode=293&con_lng=ger

in order to get the output in German language.

Is there a configuration file where German could be set as default language?

Answer

It is not possible to make the default language of the X services be anything but English. ENG is the hard-coded default and, unlike "regular WEB" (/F), it is not read from a global variable (like www_con_lng for /F).
