

file-20 job submitted from command line gets "Mod by 0"

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description

When file-20 (Patron load) is submitted from command line, this occurs:

```
aleph@zaleph(a21_1):~/a21_1/alephm> cd /exlibris/aleph/u21_1/xxx50/scratch  
  
aleph@zaleph(a21_1):~/a21_1/alephm> /exlibris/aleph/a21_1/aleph/proc/p_file_20  
XXX50,patron_purge_plif_151026-test patron_purge_plif_151026-test.rpt,Y,%+,XML  
Mod by 0.
```

That is, the job is not actually submitted and this "Mod by 0" appears at the end of the command.

Resolution:

The input file name ("patron_purge_plif_151026-test") and the report file name ("patron_purge_plif_151026-test.rpt") were separated by a space. All parameters in Aleph command-line-submitted jobs need to be separated by commas.
