

"Failed to find ADM-BIB relation"

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

The following error is seen when selecting an item for a particular bib record: "Failed to find ADM-BIB relation."

When the ADM record for this item is viewed in util f/4, rather than having "FMT AD", as it should, it has "FMT HO".

If this ADM is deleted and a new one created, when the new ADM record is viewed in util f/4 one sees *both* a correct "FMT AD" segment and an incorrect/extraneous "FMT HO" segment.

Resolution:

As described in Case 00173918, the items and orders connected to this problem ADM were moved to a new ADM and the problem ADM was deleted. Note: moving order records in this fashion is particularly complicated.
