
Security issue when Web OPAC URL is copied/shared

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

We have a security issue:

Patron A logs in to the OPAC, finds a book, clicks on full view, and copies the URL

<http://neptun.corp.exlibrisgroup.com...001&format=999>

and sends this link to Patron B. When Patron B clicks on this URL he can see the Login data from Patron A, because the ID-Session is still active.

(Once the ID- session is not active anymore, it is OK: Patron B can no longer see Patron A's Login Data.)

[As described in KB 5895, Patron B, using patron B's session ID, will see Patron A's search results.]

Resolution:

In an Internal Note. Contact Ex Libris Support.
