

ALEPHADM, tab34 column 5: pound-sign ("#") propagated across entire column

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

tab34 col.5 (call no) update through gui alephadm. When the pound sign / hash ("#") is placed in col.5, and then one goes to the next place to edit, multiple hashes are added across the width of the column.

Resolution:

Please fill in one # and one space. Then only one hash will appear in the field when editing in ALEPHADM.

The addition of multiple # is a feature when it is necessary to fill the whole field with hashes.

The last sentence of the header for column 5 has been changed [v21 rep_change #000186] to say:

"For all call numbers, use one # in the first position, followed by a space in the second position, that is: #<space> ."
