
Modify course (GUI) search

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

Admin...Course...Course Doc List...Search button

How to modify the search screen that appears

Resolution:

There is very brief information in the System Librarian's Guide – Course Reading and Reserves Version 20.0 on page 18 in the 8.5.3 Search Form for Course Reading section. It reads:

The configuration for the search form (searching for a bibliographic record in order to add it to a Course Reading List) is defined in the ADM library:

```
./tab/pc_tab_find_course.eng
```

The order of the lines in `pc_tab_find_course.eng` determines the order they are displayed in the search screen. You can have up to eight lines in the file and notes 3 and 4 in the header show how to add comments or mark a line as non-used. Note that col 1 is the heading code from `tab00.eng` (and associated index code in the `tab11_*` files).

I think that takes care of all of your questions except "Is it possible to have the cursor default to a specific input field?". This feature is not customizable.
