

## pc\_server doesn't start

- **Product:** Aleph
  - **Product Version:** 20, 21, 22, 23
  - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
- 

### Description:

We are upgrading from version 20 to version 21 with Upgrade Express. The pc\_server 6991 won't start. It doesn't show up in util w/1/4. I have confirmed with ps -ef |grep 6505 that there are no processes running. When I try to start it with util w/3/3, there is no error message, but ... it doesn't start.

### Resolution:

This was caused by an incorrect change to \$alephe\_root/pc\_server\_defaults. (The \$aleph\_proc/www\_server proc does a "source pc\_server\_defaults.")
