

How to find problem record in input file

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

The log of a batch job has "START READING" and "READING DOC" messages:

```
START READING 000000001  
READING DOC 000001001
```

but encounters an error and fails.

How can we tell what input record it was working on at the time of failure?

Resolution:

See http://swami/wiki/How_to_find_the_pr..._an_input_file .

Contact Ex Libris staff in this regard.
