

No. of Recs wrongly appears as 999

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

When you do a browse search for a term that produces a large number of results, e.g. author = shakespeare w, the 'No. of Recs' column shows 999 for no apparent reason. The Shakespeare W search result includes two variations that say "999", but when you look at them they only have 245 and 171 respectively.

Resolution:

This display is controlled by max-z02-count in util G 2. This was not set. I have set this at 99, now anything less than 99 shows as the number, anything more shows as 99+. Please feel free to edit this in util g 2 if you wish.
