
Task manager: Print Files with Extension or Print ID

- **Product:** Aleph
 - **Product Version:** 20, 21, 22, 23
 - **Relevant for Installation Type:** Dedicated-Direct, Direct, Local, Total Care
-

Description:

How do you get files with extensions to print via the task manager? The file list of remote files does not show files with extension. I cannot see how it can be done by changing a setting in alephcom.ini.

Resolution:

The file extensions (print IDs) that can be shown in the GUI Task Manager are defined in xxx50/tab/tab_file_aut. If the tab_file_aut file exists but NO extensions are defined or if no file exists, then ALL files with or without extensions are shown.

If the tab_file_aut file exists and specific extensions are defined, then only files with NO extension or with those extensions that match the definitions are shown.

Examples:

```
! Allow all files with or without extensions to display for a specific user
##### MASTER ! Allow all files with no extension or with a specific extension
(noprint) to display to all users
noprint #####
! Allow all files with no extension or with a specific extension (printer01) to
display to 3 specific users
printer01 CPPRINT ALEPH LEAH
```

If you want everyone to be able to see all print files, you could have just the single line:

```
#####
```
